CASE HISTORY

VCI-146

DATE

May 2000

CUSTOMER

Large Brake Manufacturer

CORTEC REP

Ken Motsinger Associates, Inc.

CORTEC PRODUCTS

VCI-146

PROBLEM

A large brake manufacturer dipped brake components into an oil based rust preventative to protect them during shipment. During the shipment of these parts, rust spots and corrosion was occurred. The customer needed a product that would provide superior protection against corrosion.

SOLUTION-AND APPLICATION

VCI-146 paper was placed on top of wooden trays. Brake components were then placed on the VCI-146 paper. Four components were stacked together and then stretch wrapped for shipment.

CONCLUSION

The Cortec solution was cost effective and also was an easily implemented process that completely protected the brake components from possibility of future corrosion.
